

DELIGHTFUL DOLPHINS

BODY

A dolphin has a sleek, streamlined body which is perfect for swimming and diving. Their colouring acts as camouflage.

FINS & FLIPPERS

Dolphins use their dorsal fin for balance and their pectoral flippers for steering.

TEETH

Dolphins have rows of small, cone-shaped teeth.

TAIL

A dolphin's back half is full of large muscles which propel them quickly through the water. Some dolphins can fly through the water at over 50 kilometres per hour over short distances.

BRAIN

Dolphins are super smart and are among the few animals who can use tools. Dolphins are highly social and live and play in groups called pods.

EYES & EARS

Dolphins have a keen sense of sight which helps them track down meals and keep a lookout for predators. They also have excellent hearing, both below and above water.
