

FASCINATING FISHES

GOLDFISH

Goldfishes can keep track of the time of day without a clock.

OI!

MINNOW

Fishes aren't silent. They drum their fins, blow bubbles, whistle, rub their teeth & growl to communicate. Minnow fishes 'shout' when they get angry with other fishes in their space.

RAINBOWFISH

Rainbowfishes can remember how to solve puzzles years after they first learned them.

Just because I can't wag my tail, meow or cuddle, it doesn't mean I can't think, feel pain or be happy. I am someone not something.

WRASSE

Many types of fishes build nests for their babies, just like birds do. Wrasse fishes friends gather together & build their nests in the same spot. The daddy fishes then take turns in guarding all the nests while the other parent fishes eat.

SALMON

Salmon fishes have an amazing sense of smell. Their noses are more sensitive than a dog's!

ANGELFISH

Angelfishes stay loyal same partner their whole lives. They kanikani (dance) in circles with each other to keep their bond strong.

GROUPE

Grouper fishes love attention & enjoy being petted by their human friends. They will swim to divers who they trust & rub against them asking for cuddles, just like cats do.

CHICHLID

Cichlid fishes have complex social groups. Some adult fishes will look after the baby fishes while the parent fishes go to find food.

PUFFERFISH

Pufferfishes spend weeks making complex sand art to impress their mate and to make a safe space for their eggs.

CATFISH

Catfishes have tastebuds all over their bodies. If people were the same, we would be able to taste the air around us.
